Welcome to Greenplum Performance Monitor 2.0.0

Greenplum Performance Monitor is an optional performance monitoring feature that administrators can install and enable for Greenplum Database. Greenplum Performance Monitor lets administrators view the status and performance of actively running queries and allows for detailed analysis of historical queries and system metrics. A browser-based graphical interface provides easy access to a variety of configurable views and reports on performance data.

Please refer to the following sections for more information about this release:

- Known Issues in Greenplum Performance Monitor 2.0.0
